

Rosette covering the hydraulic connector and internal tapered plug - perfect finish and aesthetics in your projects!

As a manufacturer of solutions that improve the aesthetics and functionality of space, we present a covering rosette - the perfect solution for finishing the installation, ensuring an elegant look and a perfect final effect of your product. The rosettes are dedicated to manufacturers of buffer tanks, companies from the construction, installation and finishing sectors that are looking for the highest quality accessories. The internal tapered plug, which is a complementary product, protects the holes against contamination during transport.

Rosette allows for aesthetic finishing of the buffer tank lagging holes the hydraulic connectors.
